Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The variant SLO can specifically recognise wild-type anti-SLO antibodies (ASO) but has no haemolytic activity. It can be used for the determination of previous and/or current infection by Streptococcus pyogenes. It enables ASO assays to become commercially viable and avoids the risk of handling haemolytically active S. pyogenes wild-type SLO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Streptolysin O variants produced by recombinant DNA technology having no haemolytic activity and recognised by wild-type anti-streptolysin O antibodies, useful in diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Streptococcus pyogenes infection Claim 17; Fig 2; 80pp; English.

Claim 7; Fig 2; 60pp; English.
The sequence is that of a soluble deriv. of Streptolysin O
The sequence is that of a soluble deriv of Streptococcus pyogenes
genomic library clone rSLO.3. It is useful in immunodiagnostic assays
which rely upon, e.g. the haemolytic properties of wild type
Streptolysin O. Recombinant Streptolysin O is obtd. more cheaply
than purified Streptolysin O obtd. from Streptococcus pyogenes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Deriv. of streptolysin 0 with haemolytic activity immuno-diagnostic assays which rely on haemolytic wild-type Streptolysin 0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   N-PSDB; Q38286.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              internalises polynucleotide (PN) into endosome, then lyses endosome to release PN into cell's cytoplasm

Example 3; Page 13; 23pp; English.

C The present peptide is a listeriolysin O (LLO) haemolytic domain (HD) fragment, which is 100% conserved in the LLO homologues streptolysin O, and pneumolysin. A 201 bp fragment encoding the LLO Streptolysin O, and pneumolysin. A 201 bp fragment encoding the LLO C cluble molecular complex, for the specific targetting of a polynucleotide (PN) to a cell. The complex comprises a PN, a carrier comprising a PN binding agent and a cell specific binding agent, which binds to a surface mol. of the cell and is internalised into an endosome, and a bacterial component (i.e. the PN into cell's cytoplasm. The complex can be used therapeutically considered the cell's cytoplasm. The complex can be used therapeutically considered the cell's cytoplasm. The complex can be used therapeutically considered the cell and is considered to the cell's cytoplasm. The complex can be used therapeutically considered the considered the cell and considered the cell and considered the cell and considered the cell considered the considered the considered the cell cell's cytoplasm. The complex can be used the cell cell cell's cytoplasm.

C pneumoniae (particularly meningitis) but possibly also Helicobac pylori (ulcers and gastric cancer). It may be of particular use before insertion of an in-dwelling device or any other invasive procedure. The protein, or nucleic acid encoding it, can also be used in vaccines to induce a cellular and/or humoral immune response, or to screen for other that are potential sources of control elements for bacterial gene expression. Detecting a sequence encoding the protein can be used diagnostically, e.g. to detect a mutation for secrecing or classifying infectious agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Listeriolysin O; haemolytic domain peptide.
Listeriolysin O; haemolytic; domain; streptolysin O; pneumolysi soluble molecular complex; specific; targetted; polynucleotide; endosome lysis; bacterial component; cytoplasm; therapeutic; in vivo; ex vivo; in vitro; delivery; cell specific; hemolytic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 11-JAN-1996.

It, or agonists of it, may be useful as an antibacterial for treatment or prevention of infection, specifically caused by 5.pneumoniae (particularly meningitis) but possibly also Helicobacter pylori (ulcers and gastric cancer). It may be of particular use before insertion of an in-dwelling device or any other invasive procedure. The protein, or nucleic acid encoding it, can also be used in vaccines to induce a cellular

The claimed signal peptide encoding sequence (see tag e of T0869: is pref. operably linked at the 3' end to a protein encoding sequence. The protein is pref. the S-layer protein (see tag f of T08695), At the 5' end, the signal peptide encoding sequence is pref. linked to an expression control sequence, pref. the sequence given in T08696.
                                                                                  s-layer protein, sbs-A. S-layer structures can be used as vaccines or adjuvants, particularly when they include a bacterial ghost that may contain additional epitopes in its membrane. Other uses of recombinant sbs-A depending on the nature of the inserted peptide, are as an universal carrier for biotinylated reactants for use in immunological or hybridisation assays (the insert is streptavidin), to induce immune responses (epitopes), as a reagent for removing cytokine or toxin from serum (antigenic epitopes), as a molecular spinning nozzle (polyhydroxybutyrate synthase) and as a molecular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acid encoding signal peptide of Bacillus stearothermophilus s-layer protein - which has a lysine content of at least 10 per
                                                                                                                                                                                                                                            recombinant proteins containing heterologous inserts, e.g. epitope(s), useful as vaccines and adjuvants Claim 1; Pages 9-14; 31pp; German.
The present sequence is the Bacillus stearothermophilus PV72

                                                                                                                                                                                                                                                                                        PT Helicobacter pylori nucleic acid sequences and encoded
PT polypeptide(s) - useful in vaccines to treat or prevent H. pylori
PT infection and for diagnosis of H. pylori infection
PS Claim 14; Page 571; 1145pp; English.

CC This sequence is a H. pylori protein of unspecified function.

CC This sequence is a H. pylori protein of unspecified function.

CC This sequence is a H. pylori polypeptide binding compounds,

CC infection or to identify H. pylori polypeptide binding compounds,

CC useful as potential H. pylori life cycle activators or inhibitors. The

CC DNA and probes derived from it may be used for the identification of

CC L. pylori in a sample and the diagnosis of H. pylori infection. Nucleic

CC acid sequences complementary to the DNA act as antisense sequences and

CC argainst the protein can be used in immunoassays to evaluate the abundance

CC and distribution of H. pylori-specific antigens. The genomic sequence of

CC H. pylori (ATCC 55679) was determined from overlapping contigs generated

CC defined by computer evaluation. To identify likely H. pylori antigens for

CC vaccine development, the amino acid sequences predicted coding regions

CC defined by computer evaluation. To identify likely H. pylori antigens for

CC were analysed for significant homology to other known or exported

CC interest, particular regions can be isolated from H. pylori by PCR

amplification for recombinant polypeptide production. English pCR

CC This sequence is a H. pylori cellular protein.

CC This sequence is a H. pylori or polypeptide binding compounds, The protein may be used in a vaccine to prevent or treat H. pylori CC useful as potential H. pylori life cycle activators or inhibitors. The CDNA and probes derived from it may be used for the identification of CC H. pylori in a sample and the diagnosis of H. pylori infection. Nucleic acid sequences complementary to the DNA act as antisense sequences and CC can be used to prevent the translation of H. pylori mRNA. Antibodies against the protein can be used in immunoassays to evaluate the abundance CC and distribution of H. pylori-specific antigens. The genomic sequence of the pylori (ATCC 55679) was determined from overlapping contigs generated CC membranically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions CC vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported interest, particular regions can be isolated from H. pylori by PCR complification for recombinant polypeptide production, e.g. in E. coli nears.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

mono:amine oxidase enzyme
Disclosure; Column 47-50; 30pp; English.

A genetic defect linked to pll-p2l of the X chromosome, especially
mutation C936T in exon 8 of the monamine oxidase (MAD) gene is relate
abnormal behaviour. MAD metabolises serotonin, dopamine and
noradrenaline, neurotransmitters whose metabolism is known to affect
behaviour. Disregulation of these transmitters leads to borderline
behaviour. Disregulation of these transmitters are discluding impulsive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WO9520872-A1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the growth of the transgenic abalone. Transgenic molluscs created in this manner can be used to carry DNA whose product promotes growth enhancement, e.g. a gene encoding a growth factor esp. an insulin-like growth factor. Sequences whose product affects the taste or texture of mollusc tissue can also be introduced in this way. Polyploid organisms can be created by treating the fertilised egg with cytochalasin B. If its citilised egg is diploid the resulting polyploids are triploid or tetraploid. These polyploid organisms have enhanced growth properties relative to the same organism with a normal chromosome complement. Triploids allow for the production of sterile seed stock, thereby
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     overcoming environmental concerns.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New transgenic molluscs, esp. abalone - contg. a DNA sequence heterologous to the mollusc, esp. for enhancing growth properties Example 1; Page 38-39; 61pp; English.

This sequence represents the cohe salmon growth hormone (csGH). The DNA encoding this sequence was included in a vector used to create transgenic molluscs (especially abalone). In the vector pLH2 the encoding sequence is under the control of the actin promoter ACT5-C. This vector increased in the control of the actin promoter ACT5-C. The sector increased in the control of the actin promoter ACT5-C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               noradrenaline; mental retardation; impulsive aggression.

Nucleotide sequence of the gene for perfringolysin O
(theta-toxin) from Clostridium perfringens: significant homology with the genes for streptolysin O and pneumolysin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A3495
